Architecture X Music X Acoustics

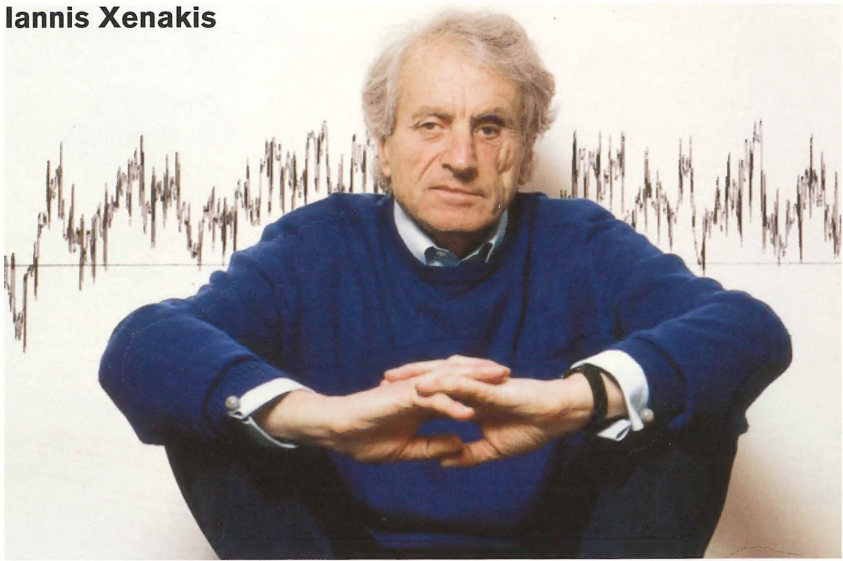

June 1 – 11, 2006

Toronto, Canada

www.soundaXis.ca

Iannis Xenakis

Iannis Xenakis—the only world-class composer with triple careers—as innovative architect, as the Da Vinci of modern music, and as pioneer of computer-aided music and digital arts. —Nouritza Matossian

A philosopher of sound and space, Xenakis created works that reduced materials to fundamental principles and emphasized the intimacies and mutual definitions between music, acoustics, and architecture.

Born of Greek heritage in 1922, Iannis Xenakis attended boarding school on the island of Spetsai. As an engineering student in Athens during WWII, he joined the resistance to Nazi occupation. Blinded in one eye, and sentenced to death by a war tribunal, Xenakis escaped to France where he worked as an engineer with the famous architect Le Corbusier. In the height of post war revitalization, Xenakis was soon designing buildings of his own, but his secret passion was music.

In 1954, Xenakis composed his first orchestral work, *Metastaseis*, based on his comparisons between architectural measurements and musical timing. Soon following, he invented 'stochastic music,' which adapted probability functions to composition. A passionate advocate of the humanizing influence that music and the arts could have on the sciences, Xenakis articulated the value of interdisciplinarity, and composed over 150 works.

Why **soundaXis** – Why Now?

Exploring the interaction and shared compositional structures between music and architecture, **soundaXis**, June 1–11, 2006 transforms Toronto into a playground of discovery through concerts, sound installations, symposia, exhibits, and screenings.

Presented by New Music Arts Projects (NMAP), this emerging city-wide celebration offers both international and local festival-goers a fresh look into the intimacies between sound and space; **soundaXis**' cultural and educational exploration of the fundamental ideas that permit translation from one art form to another simultaneously unearths Toronto's evolving acoustical landscape.

Thematically based on revolutionary thinker, architect, engineer, mathematician, and composer, Iannis Xenakis (1922–2001), the multifaceted breadth and scope of **soundaXis** is unprecedented. Xenakis' compositions will be performed alongside the works of contemporary composers, not only in the traditional domain of the concert hall, but in the din of the cacophonous sounds of a dense urbanity.

With new major cultural facilities leading the renaissance of our modern metropolis, the creative register of cultural expression on the face of our city is at an exciting threshold. Issues of sound and space, from both artistic and "quality of life" perspectives, are at the forefront of city-wide dialogues, debates, and negotiations.

Toronto is alive with architects, designers, musicians, and composers of great talent and eloquence; **soundaXis** finds an audience in the compositions of a postmodern world, and provides the stage for New Music to be heard.

Saturday June 3, 10:00am

MUSIC of/in THE CITY

Institute for Contemporary Culture ROM Theatre, 100 Queen's Park

Does music speak with eloquence to the challenges and sensibilities posed by the urban condition? New cultural and performance facilities are filled with old music, marvelous and rich in tradition, but what is the nature of contemporary classical or 'serious' music, compositions founded in the strategies and discourse of current reflections and thoughts? New digital technologies and electro-acoustics have broadened the scope for composer and musician, adding to the possibilities of both voice and instrument. Panelists Jonathan Burston, Rodolphe El-Khoury, Peter Hatch, Ute Lehrer, Diane Lewis, and David Lieberman (moderator), consider what is the New Music and how it speaks to a postmodern world.

Symposium will be framed by **X Marks the Spot**.
